Introduction to Product Management: Rise 360 Content Sheet

Oct 31, 2026 · @Stella Kitur

This content sheet gives the build team every screen of a seven-module, self-paced product management course in Rise 360, with the block type, on-screen text, media, alt text and interaction for each lesson.

Course overview

Field	Detail
Course title	Introduction to Product Management
Target audience	Career changers, junior associates and aspiring product managers with no formal PM experience
Duration	7 hours across seven modules, about 60 minutes each
Delivery	Self-paced eLearning built in Rise 360, exported to SCORM 1.2 or xAPI for the LMS
Prerequisites	None. Familiarity with a digital product such as a mobile app or website helps
Completion rule	Learners view all lessons and score 80% or higher on the final assessment
Navigation	Sidebar menu with free navigation, lesson completion tracking on
Visual style	Course cover image, one accent colour, sentence case headings, consistent icon set
Running case study	Mwangaza, a fictional Nairobi learning app, used in every module so concepts build on one story
Course owner	To be confirmed
Subject matter expert	To be confirmed

Learning outcomes and module map

By the end of the course, learners can describe the PM role, run a basic discovery cycle, prioritise a backlog, write user stories, choose product metrics, plan a launch and use AI tools responsibly in their daily work.

Module	Title	Learner outcome	Time
1	What product	Explain the PM role, the product lifecycle and how	60 min

Module	Title	Learner outcome	Time
	management is	PM differs from project management	
2	Discovery and user research	Plan interviews and turn findings into a clear problem statement	60 min
3	Strategy and prioritisation	Write a product vision and rank features using RICE and MoSCoW	60 min
4	Delivery and working with engineering	Write user stories with acceptance criteria and run a basic sprint cycle	60 min
5	Metrics and experimentation	Select a north star metric and design a simple A/B test	60 min
6	Launch and stakeholder communication	Build a launch checklist and write a stakeholder update	60 min
7	Using AI as a product manager	Write effective prompts, apply AI to research, writing and analysis, and check AI output before acting on it	60 min

Module 1: What product management is

Outcome: learners explain what a product manager does, how a product moves through its lifecycle and where PM sits next to design, engineering and project management.

Lesson	Rise block	On-screen content	Media and alt text	Interaction and notes
1.1 Welcome	Cover, then Text with heading	Course welcome, six module titles, what learners will be able to do at the end, time needed	Banner image of a team around a whiteboard. Alt: "Product team sketching a roadmap on a whiteboard"	Add a course navigation tip in a Note block
1.2 Meet the case study	Quote and Text	Introduce Mwangaza, a learning app for Kenyan secondary students, and its team of five	Character cards for PM, designer, engineer, data analyst, sponsor. Alt text gives	Use Labeled graphic so learners click each team member

Lesson	Rise block	On-screen content	Media and alt text	Interaction and notes
			name and role	
1.3 The PM role in one sentence	Statement block, then Text	"A product manager makes sure the team builds the right thing, for the right people, at the right time." Followed by 3 short paragraphs on outcomes over outputs	None	Short reflection prompt in a Note block
1.4 What PMs do day to day	Accordion	Five panels: Discover problems, Decide priorities, Define solutions, Deliver with the team, Measure results. Each panel has 2 to 3 sentences and one Mwangaza example	Icon per panel with decorative alt	Accordion keeps text scannable
1.5 The product lifecycle	Process block	Six steps: Idea, Validate, Build, Launch, Grow, Sunset. One sentence per step	Linear flow diagram. Alt describes the six stages in order	Learners step through with Next
1.6 PM, project manager and product owner	Comparison table in Text, then Tabs	Table comparing focus, key question, success measure and typical artefact for each role. Tabs add a short example for each	None	Keep each tab under 60 words
1.7 Skills of a strong PM	Flashcards	Eight cards: curiosity, communication, prioritisation, data literacy, empathy, technical fluency, facilitation, decision making. Front: skill. Back: one line on why it matters	None	Flashcards support self-check
1.8 Knowledge check	Knowledge check, multiple choice	Q1: Which statement best describes the PM role? Q2: Which activity belongs to discovery? Q3: Match each role to its main question	None	3 questions, immediate feedback, unlimited tries
1.9 Summary	Text and Continue button	Three takeaways and a preview of Module 2	None	Continue button unlocks Module 2 if sequential navigation is

Lesson	Rise block	On-screen content	Media and alt text	Interaction and notes
				chosen

Module 2: Discovery and user research

Outcome: learners plan and run user interviews, synthesise what they heard and write a problem statement the team can act on.

Lesson	Rise block	On-screen content	Media and alt text	Interaction and notes
2.1 Why discovery comes first	Text with image	Building the wrong thing is the costliest mistake. Short story of Mwangaza launching a quiz feature nobody used	Photo of a student on a phone. Alt: "Student using a learning app on a smartphone"	Pull quote in a Statement block
2.2 Problem space and solution space	Process block	Three steps: Understand the problem, Define the opportunity, Explore solutions. One sentence and one example per step	Double diamond diagram. Alt describes the two diverging and converging phases	None
2.3 Choosing research methods	Tabs	Four tabs: Interviews, Surveys, Usability tests, Analytics review. Each tab lists when to use it, sample size and one risk	None	Tabs hold about 50 words each
2.4 Running a good interview	Video or Storyline placeholder, then Text	4 minute demo of an interview. Key rules: ask open questions, ask about past behaviour, stay silent after answers	Embedded video with captions and transcript	Transcript is placed in a Text block below the video
2.5 Spot the bad question	Sorting activity	Learners sort 8 interview questions into Good and Leading or Closed	None	Feedback explains the reason for each placement

Lesson	Rise block	On-screen content	Media and alt text	Interaction and notes
2.6 From notes to insight	Timeline or Process block	Steps: Capture quotes, Group into themes, Name the pattern, Write the insight	Affinity map image. Alt describes three coloured clusters with theme titles	Mwangaza interview excerpts used as source material
2.7 Writing a problem statement	Text, then Note block	Template: "[User] needs a way to [need] because [insight]." Two worked examples	None	Learner download of a blank template as a PDF
2.8 Knowledge check	Knowledge check, multiple response	Q1: Which are open questions? Q2: Choose the best problem statement. Q3: Which method fits a quick usability issue?	None	3 questions, feedback with rationale
2.9 Summary	Text and Continue button	Three takeaways and a preview of Module 3	None	None

Module 3: Strategy and prioritisation

Outcome: learners write a product vision and rank a feature list with RICE and MoSCoW.

Lesson	Rise block	On-screen content	Media and alt text	Interaction and notes
3.1 From problem to strategy	Text with image	A strategy links company goals, user needs and the product bets that connect them	Pyramid graphic with Vision, Strategy, Roadmap, Backlog. Alt lists the four levels top to bottom	None
3.2 Writing a product vision	Text, then Accordion	Vision template and three examples. Accordion panels explain Audience, Need, Differentiator	None	Mwangaza vision shown in a Statement

Lesson	Rise block	On-screen content	Media and alt text	Interaction and notes
				block
3.3 Roadmaps that communicate	Tabs	Tabs: Now-Next-Later, Timeline, Outcome-based. Each tab shows a sample and one best-use case	Roadmap images with alt text summarising the columns	Keep each sample to 3 items
3.4 Why prioritise	Statement block and Text	Resources are limited, so every yes is a no to something else	None	None
3.5 The RICE framework	Process block, then Text	Reach, Impact, Confidence, Effort. Formula shown as RICE score = (Reach x Impact x Confidence) / Effort	None	Worked example with 3 Mwangaza features in a table
3.6 Try RICE	Interactive scenario	Learners score 4 features by choosing values from drop-downs and see the ranked list	Built in Storyline and embedded in Rise	Provide a text alternative table of the same data
3.7 The MoSCoW method	Flashcards	Four cards: Must, Should, Could, Won't. Back of each card gives a one-line definition and an example	None	None
3.8 Choosing a framework	Comparison table in Text	RICE, MoSCoW and Value vs Effort compared by best use, data needed and speed	None	None
3.9 Knowledge check	Knowledge check, multiple choice	Q1: Which element of RICE lowers a score when unsure? Q2: Sort items into MoSCoW. Q3: Pick the best framework for a quick workshop	None	3 questions, feedback with rationale
3.10 Summary	Text and Continue button	Three takeaways and a preview of Module 4	None	None

Module 4: Delivery and working with engineering

Outcome: learners write user stories with acceptance criteria and describe how a sprint runs from planning to review.

Lesson	Rise block	On-screen content	Media and alt text	Interaction and notes
4.1 How teams build	Text with image	Waterfall and agile compared in plain language. Agile delivers in small slices and learns from each one	Two-lane comparison graphic. Alt describes one long path and a repeating loop	None
4.2 Scrum in a nutshell	Process block	Sprint planning, daily stand-up, sprint review, retrospective, with one sentence on each	Scrum cycle diagram. Alt lists the events in order	None
4.3 Roles on a scrum team	Labeled graphic	Hotspots on Product Owner, Scrum Master, Developers. Each hotspot shows the main responsibility	Team illustration with alt describing each role	Provide a Text fallback list
4.4 Anatomy of a user story	Text, then Accordion	Template: "As a [user], I want [action] so that [benefit]." Accordion covers the three parts and common mistakes	None	Mwangaza example story in a Statement block
4.5 Acceptance criteria	Text and Note block	Given, When, Then format with two examples. Tip: each story needs 3 to 5 testable criteria	None	None
4.6 Fix the story	Sorting or Fill-in-the-blank	Learners rewrite 3 weak stories by choosing the right phrase for each blank	None	Feedback shows a model answer
4.7 Working well with engineers	Tabs	Tabs: Share context, Trade off together, Respect estimates, Close the loop. Each tab gives one dos and one	None	Keep each tab to 50 words

Lesson	Rise block	On-screen content	Media and alt text	Interaction and notes
		don'ts example		
4.8 Scenario: a scope change mid-sprint	Scenario block	A stakeholder asks for a new feature in week 2. Learners pick from 3 responses and see consequences	Portrait of the Mwangaza engineer. Alt: "Engineer looking at a sprint board"	Branching with two endings
4.9 Knowledge check	Knowledge check, multiple choice	Q1: Identify the correct user story. Q2: Which event inspects the product increment? Q3: Which criterion is testable?	None	3 questions, feedback with rationale
4.10 Summary	Text and Continue button	Three takeaways and a preview of Module 5	None	None

Module 5: Metrics and experimentation

Outcome: learners choose a north star metric, build a small metric tree and design a simple A/B test.

Lesson	Rise block	On-screen content	Media and alt text	Interaction and notes
5.1 Why metrics matter	Text with image	Metrics turn opinions into evidence and show whether a product change worked	Dashboard screenshot. Alt summarises the three trends shown	None
5.2 Types of metrics	Tabs	Tabs: Acquisition, Activation, Retention, Revenue, Referral. Each tab gives one Mwangaza example metric	None	AARRR framing, 40 words per tab
5.3 Choosing a north star metric	Text, then Statement block	A north star metric reflects the value users receive. Mwangaza example: weekly learning minutes per active student	None	None
5.4 Build a metric tree	Process or Labeled	North star at top, three input metrics below, one action per	Tree diagram. Alt describes	Provide a text

Lesson	Rise block	On-screen content	Media and alt text	Interaction and notes
	graphic	input	the parent and its child branches	outline
5.5 Leading and lagging indicators	Comparison table in Text	Definition, speed, example and typical use of each	None	None
5.6 Match the metric	Matching activity	Learners match 6 business questions to the metric that answers each	None	Feedback explains each pairing
5.7 Experiments and A/B tests	Process block	Steps: Form a hypothesis, Pick a metric, Split users, Run, Read the result. One sentence each	A/B split diagram. Alt describes two user groups seeing different versions	None
5.8 Writing a hypothesis	Text and Note block	Template: "If we [change], then [metric] will [direction] because [reason]." Two examples	None	Downloadable hypothesis template
5.9 Reading results with care	Accordion	Panels: Sample size, Statistical significance, Novelty effect, Segment differences. Two sentences each	None	None
5.10 Knowledge check	Knowledge check, multiple choice	Q1: Choose the best north star for the case. Q2: Which is a leading indicator? Q3: Spot the flaw in a test design	None	3 questions, feedback with rationale
5.11 Summary	Text and Continue button	Three takeaways and a preview of Module 6	None	None

Module 6: Launch and stakeholder communication

Outcome: learners build a launch checklist, write a stakeholder update and describe how to learn from a launch.

Lesson	Rise block	On-screen content	Media and alt text	Interaction and notes
6.1 What a launch involves	Text with image	A launch covers product readiness, support, marketing, legal and data tracking	Launch control room photo. Alt: "Team monitoring a product launch on screens"	None
6.2 Launch readiness checklist	Checkbox list	Twelve items grouped under Product, Operations, Communication and Measurement	None	Learners tick items and download the checklist as a PDF
6.3 Go-to-market basics	Tabs	Tabs: Positioning, Pricing, Channels, Messaging. Each tab holds a question to answer and one Mwangaza example	None	50 words per tab
6.4 Phased rollouts	Process block	Internal test, Beta, Staged release, Full release. One sentence on risk and learning for each phase	Staircase graphic. Alt describes four increasing steps	None
6.5 Know your stakeholders	Labeled graphic	Power and interest grid with four quadrants. Hotspots explain how to engage each group	Grid image with text alternative table	None
6.6 Writing a stakeholder update	Text, then Accordion	Update structure: Headline, Progress, Risks, Decisions needed, Next steps. Accordion shows a weak and a strong example	None	Model update of 120 words
6.7 Practise: pick the right message	Scenario block	Learners choose the best update for an executive, an engineer and a customer support lead	Three stakeholder portraits with alt text	Feedback explains audience fit
6.8 Learning after launch	Timeline	Day 1 checks, week 1 review, month 1 retrospective, quarter 1 outcome	None	None

Lesson	Rise block	On-screen content	Media and alt text	Interaction and notes
		review		
6.9 Your next steps in product management	Text with Statement block	Pathways: associate PM, product owner, product analyst. Suggested reading and community links	Link list with descriptive link text	None
6.10 Course summary	Text and Continue button	Recap of Modules 1 to 6 and a preview of Module 7, which covers using AI as a PM	None	Continue unlocks Module 7

Module 7: Using AI as a product manager

Outcome: learners apply AI tools to research, writing, analysis and planning tasks, write clear prompts and check AI output before they act on it.

Build note: each lesson lists a starter prompt for the Rise 360 AI Assistant. Generate the draft, then edit it against the on-screen content below so facts, tone and the Mwangaza story stay consistent.

Lesson	Rise block	On-screen content	Media and alt text	Rise AI Assistant prompt and notes
7.1 Why AI matters for PMs	Text with image	AI speeds up first drafts, summaries and analysis so PMs spend more time on judgement and decisions. Short Mwangaza example: the PM drafts interview themes in 20 minutes instead of 2 hours	Photo of a PM working at a laptop. Alt: "Product manager reviewing AI-generated notes on a laptop"	Prompt: "Write a 120 word introduction explaining how AI helps product managers work faster, for beginners, in a friendly professional tone."
7.2 Where AI fits in the PM workflow	Tabs	Tabs: Discover, Define, Prioritise, Deliver, Measure, Communicate. Each tab names one AI task and links back to the earlier module	None	Prompt: "For each of six PM activities, give one practical way AI can help, in 30 words." Keep each tab to 40 words
7.3 Writing a strong prompt	Process block	Five steps: Role, Context, Task, Format, Constraints. One sentence and a short example for each	Prompt anatomy diagram. Alt lists the five	Prompt: "Explain the Role, Context, Task, Format, Constraints prompt structure with a

Lesson	Rise block	On-screen content	Media and alt text	Rise AI Assistant prompt and notes
			parts in order	one sentence example for each, using a product manager scenario."
7.4 Fix the weak prompt	Sorting activity	Learners sort 8 prompts into Weak and Strong, then see a rewritten version of each weak prompt	None	Prompt: "Write 8 prompts a PM might send to an AI tool, 4 vague and 4 specific, on user research and prioritisation." Check feedback wording for each
7.5 AI for research and synthesis	Accordion	Panels: Summarise interview notes, Cluster themes, Draft personas, Spot gaps in a survey. Each panel includes a sample prompt and a caution to remove personal data first	None	Prompt: "Describe four ways PMs use AI to synthesise user research, each with a sample prompt and one risk."
7.6 AI for writing and planning	Tabs	Tabs: User stories, Acceptance criteria, Roadmap options, Stakeholder updates. Each tab shows a before prompt, the AI draft and what the PM must edit	Side-by-side sample output in a Text block	Prompt: "Show a short example prompt and a sample AI response for writing a user story for a Kenyan secondary student learning app."
7.7 AI for data and metrics	Text, then Note block	Use AI to explain a metric, suggest an experiment design or write a query. Always confirm numbers against the source dashboard	Chart sample. Alt describes the trend shown in one sentence	Prompt: "Write 150 words on how PMs can use AI to analyse product metrics safely."
7.8 Know the risks	Flashcards	Six cards: Hallucination, Bias, Confidentiality, Outdated information, Over-reliance, Copyright. Front gives the risk and back gives a one line example	None	Prompt: "Create six flashcards on risks of using AI at work, each with a PM example and one safeguard."

Lesson	Rise block	On-screen content	Media and alt text	Rise AI Assistant prompt and notes
		and a safeguard		
7.9 Check before you trust	Checkbox list	Verification checklist: confirm facts and numbers, remove private data, check for bias, match the tone to the audience, keep the final decision with a person	None	Learners download the checklist as a PDF. Prompt: "Write a 6 item checklist for reviewing AI-generated product documents."
7.10 Scenario: AI drafts a stakeholder update	Scenario block	The AI draft contains an invented figure and a promise the team has not agreed. Learners choose what to do with the draft and see the outcome	Portrait of the Mwangaza PM. Alt: "Product manager reading a draft update"	Prompt: "Write a branching scenario with 3 choices about reviewing an AI-written stakeholder update that contains an invented statistic." Two endings
7.11 Knowledge check	Knowledge check, multiple choice	Q1: Which prompt gives the AI enough context? Q2: What should a PM do first with an AI summary? Q3: Which data should never go into a public AI tool?	None	Prompt: "Write 3 multiple choice questions with feedback on safe and effective use of AI by product managers."
7.12 Course summary	Text and Continue button	Recap of Modules 1 to 7, three takeaways on responsible AI use and a prompt to take the final assessment	None	Continue unlocks the final assessment

Assessment plan and build notes

The final assessment has 15 questions drawn evenly from the seven modules, and learners need 80% to pass.

Element	Specification
Final assessment	15 multiple choice and multiple response questions, 2 to 3 per module, randomised order
Attempts	3 attempts, with feedback by module after each attempt
Formative checks	3 knowledge check questions at the end of each module, unlimited

Element	Specification
	tries
Capstone option	One-page product brief for Mwangaza using the problem statement, RICE ranking and launch checklist templates
Completion	All lessons viewed and final assessment passed

Accessibility and build notes

- Write alt text for every informative image and mark decorative images as decorative.
- Add captions and a full transcript to every video.
- Use heading levels in order and descriptive link text.
- Pair every colour cue with a label or icon, and check contrast at 4.5:1 or higher.
- Provide a text alternative for each Labeled graphic, sorting and scenario activity.
- Keep Text blocks under 150 words and add one visual or interaction every 2 to 3 screens.
- Keep Storyline embeds keyboard accessible and test them with a screen reader before review.
- Use the same icon set, accent colour and Mwangaza character names across all modules.

Review checklist

- ☐ Subject matter expert accuracy check on all seven modules
- ☐ Copy edit for plain language and sentence case headings
- ☐ Rise 360 preview on desktop, tablet and phone
- ☐ SCORM or xAPI test in the LMS, including bookmarking and completion
- ☐ Accessibility check with keyboard and screen reader
